Homework12

Use the example code in this repo as boilerplate code

Install with

```
cd src
npm install --legacy-peers-deps
```

then run with

```
npm start
```

1. Go through the demo code, make sure you understand it.

2. Deploy the basic cairo contract from exercise 6 to the test net

3. Add functions in the react app to interact with the basic cairo contract. (You can use a different contract if you prefer)
